

III. SPECIFICATION AMENDMENTS

Please replace the paragraph beginning on page 8, line 26 through page 9, line 4 as rewritten below:

The fiber optic rotary joints 44 and 46 in the antenna system 40, pass the link 60 through the antenna gimbals ~~(not shown)~~ 47 and the wavelength division multiplexing system 42. The present invention thus allows both RF and data to be sent over the link 60. It is a feature of the present invention to provide a fiber optic link 60 from the shelter 20 up through the antenna 40 fiber optic rotary joints 44,46 and locate the sensitive RF components off the antenna and/or out of the enclosure into the shelter 20 where the environment is mild and dry.
